SignageProposal 12/30/13, 3:58 PM

SVCRA signage strategy DRAFT November 8, 2013

sign types and (general) locations

- -blue diamond trail markers on foot trail, attached to trees with two stainless fasteners not driven flush, at sight distances apart, visible both directions.
- -bike trail markers?
- -Red diamond markers, handled similarly, on access trails.
- -brown and yellow navigation signs (arrows, "trail," "parking," etc.)
- -white, black and red warning signs (dangers, prohibitions)
- -interpretive signs, waist-high mounts, colors TBD

Strive to minimize signs on the trail itself

exceptions:

- -interpretive signs at features
- -directional signs, including location signs
- -trail markers

Strive for a consistent look to all signage

- -consistent in color, letter form, shape, size
- -codes for smart phones connect to SV webpages, when available
- -display property owner's logo
- -display sign custodian's logo, if different
- -emergency phone number on some signs
- -optimize size and siting, readable but not intrusive
- -mount most signs on posts, not trees

Identify caretakers

- -sign design and location approved by property owner, reviewed by partners
- -a partner besides the owner might purchase, install, monitor, replace the sign
